Thank
you

To our hard working volunteers

Sheryle Albeck, Margaret Appleby, Mary Camilleri, Michael Darcy, Gloria Forsyth, June Head, Margaret Hudson, Stephanie Judges, Carol McVeigh, Jan Priestley, Bill Reilly, Bob Stibbard, Ian and Maureen Thackeray, Rosalyn Tinselly, Chris and Rosalie Vine, Graeme and Janet Wright. Ted and Meryl Morphett (NBM&H) and Paul and Kate Stanley (UNSH).

Chairperson's Report

Dear Rose Friends

I hope that you are all looking forward to the Christmas season and a well earned rest with family and friends despite the challenges of the summer season. The heat, bushfires and associated low air quality are a particular challenges for our gardens

leaves covering our gardens. The weather was perfect for the show and a large crowd visited throughout the day. Ian Thackeray was the lucky winner of the 10kg pail of Sudden Impact for Roses.

Ted and Meryl Morphett from the Sydney Region were the Grand Champion Winners of the Daphne Mulley Memorial Trophy once again following a similar success last year.

Welcome to our newest member Rosemary DeKauwe who joined at the show after being impressed by the beautiful roses on display.

Mater Dei Parents and Friends Association supported our presence at the show with expert advice and the provision of an excellent venue.

The Floral Art competition was well supported with over 20 entries. Maureen Thackeray was very

successful on the day with her winning entries.

Many volunteers turned up early on the day and worked for long periods to ensure the show was a success. Without their tireless help through a long and hot day we would not have been able to stage the show.

Last but not least, many people contributed roses from their gardens to sell in the beautiful rose boxes that we had on sale. Your help was greatly appreciated and your contribution ensures that we continue to have a successful Macarthur Regional Rose Society.

Now is an ideal time to be visiting rose gardens and nurseries to get some good ideas for your own garden and roses. The open gardens and the blooming roses at local nurseries can give you a good idea of the best roses before you buy from the 2020 rose catalogues.

Our next event on 14 December is our Christmas lunch. Traditionally we hold this on the same Saturday as our usual meeting. However we meet for lunch rather than later in the afternoon. This allows us to enjoy each other's company and expertise in a relaxed atmosphere. All are welcome.

The Christmas lunch will be held at the Macarthur Sustainability Centre, 1 Mount Annan Drive opposite Flower Power. There is plenty of parking available and lunch will be a traditional lunch. The cost is \$45 a head. Payment can be made to Lorraine Hawke. You can contact Lorraine Hawke on 0410 226 548 to book and arrange payment.

Unfortunately, our intended presentation on Growing Roses in Pots will not be held. Instead we will be holding a Rose Question and Answer session. Remember to bring along all the questions you need answered about your roses and get the benefit of the collective expertise we have in the Rose Society to help us grow better roses. Bring along some roses to ask questions about and to put on our monthly show bench.

Judith

Cultural Notes

You will now be enjoying the big spring flush of rose blooming that generally comes between mid-October and November. Removing faded and spent flowers now will ensure you get a new flush at Christmas time.

When removing faded flowers there is no need to cut lower than the uppermost strong well-developed eye, which points outward on the plant. Regrowth will be quicker from this high trimming. Light feeding soon after the spring crop of blooms and maintenance of moisture in the soil will give good roses again at about Christmas time.

The weather over the last few weeks has given us ideal conditions for powdery mildew to thrive. This fungus loves humid nights when the temperature is about 15c, especially after a warm day. It affects a wide range of plants but roses can be particularly susceptible. The newer varieties are generally more resistant but in the right conditions can still be affected. Light breezes can assist the spores to spread to other plants. Particular spots at risk are the dry, warm and shady areas of the garden.

on the upper sides of the leaves but may grow on the undersides as well.

The fungus causes the leaves to twist, break, or disfigure. The stems, buds and tips can also become disfigured, dry out and die.

Transmission to other plants can quickly occur on light winds.

How to Control Powdery Mildew

Remove all the infected plant parts and destroy them. Remember, do not compost any infected plant, as the disease can still be spread by the wind and persist in the composted materials.

Spray infected plants with fungicides. Effective organic fungicides include sulphur, lime-sulphur, neem oil, Eco-oil and potassium bicarbonate. A regular spraying regime carried out every fortnight will help to keep your plants healthy and prevent powdery mildew.

Other commercial fungicides include systemic fungicides such as Triforine and Mancozeb Plus (not Mancozeb). Remember to rotate the fungicides used as powdery mildew quickly builds resistance.

Infected plants display white, powdery spots on the leaves and stems making them look as if they have been dusted with flour. The fungus starts off as circular, powdery white spots, which can first appear on older leaves. Eventually the whole leaf is covered and they wrinkle, become black and dry out. With the white powdery fur, young growth that is affected can look a little deformed. Leaves will yellow and die off as the fungus spores enter the leaf surface where the cells remove nutrients. It usually appears on the upper sides of the leaves but may grow on the undersides as well.

Preventing Powdery Mildew

In the first instance choose rose varieties that are that are resistant to the common fungi such as powdery mildew. Many of the newer roses available have been well tested for mildew-resistance and perform well in challenging weather conditions.

Avoid watering plants from overhead in order to reduce relative humidity,

particularly in the evening where the moisture will lie on the leaves for much longer than during the day.

Pick up any fallen leaves and dispose of them in the bin, do not compost as most home compost heaps are not hot enough to kill off spores.

Removing the worst affected leaves from the plant may help slow the spread of the disease, plus it will allow for more air circulation.

When planning your garden, leave room for each bush as overcrowding means poor air circulation and ideal

conditions for powdery mildew. Feed your roses with complete balanced organic fertilisers such as Sudden

Impact for Roses and tend the soil with GoGo Juice to keep it healthy.

Better Blooms

Over the next few weeks continue to foliar feed to encourage those beautiful Christmas blooms.

Use a seaweed based liquid fertiliser such as Liquid Seamungus to encourage good leaf growth and aid in the protection of your roses from heat stress.

Seamungus is a soil and plant conditioner, manufactured by brewing seaweed, fish, humic acid and manure. The seaweed contains naturally occurring stimulants along with a huge range of other essential elements. Seamungus can help your roses to respond through harsh conditions and help increase resistance to pests and diseases and promote healthy growth. There is even some evidence to suggest that plant tonics such as Seamungus can help prevent fungal issues such as powdery mildew.

Basal shoots will not be numerous until November, after the rose roots have built up energy and resources from the spring feeding round. From now onwards until March they

will come in increasing numbers. Look for reddish-green shoots coming from the bud union area. They are less numerous on old plants and because of this they are doubly precious.

Almost every basal shoot should be staked. Do not confuse them with unwanted rootstock shoots which are usually light green in colour and have different leaf shape. They come from the from the root area of the rose, usually due to digging damage to the roots. Pull them out firmly to discourage regrowth and be mindful of the

Christmas Party

Organising for our annual Christmas party is well underway. Lorraine Hawke is taking bookings and money for the Christmas Party. Lorraine has had outstanding success at organising the Christmas Party in previous years. Based on her previous success we can expect another successful and memorable event. Hurry now to book your place.

To book your seat at the lunch, and make arrangements for payment please call Lorraine Hawke on: **0410 226 548**.

Please ensure that you have the correct change for your payment and that it is placed in an envelope with your name clearly marked.

Lorraine will also be available at our next meeting on Saturday to take bookings and money for this annual event.

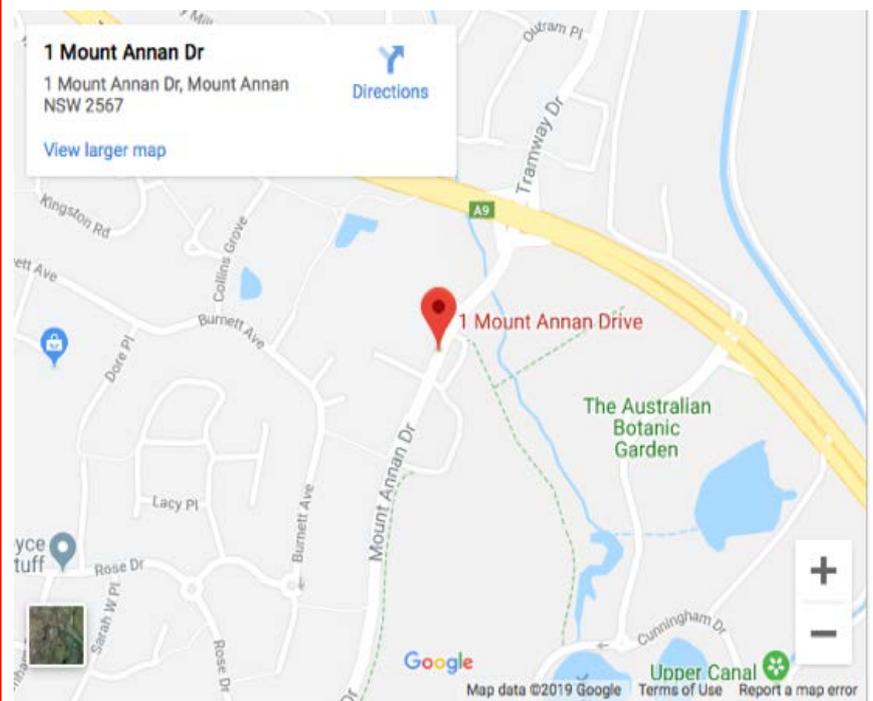

The menu is traditional but also caters for warm weather. Details for the Christmas party are:

Date: 14 December 2019

Time: 12:00pm - 3:00pm

Venue: Macarthur Sustainability Centre, 1 Mount Annan Drive, Mount Annan.

Cost: \$45 per person

Macarthur Rose Show

20 October 2019
