at Peace Park*

Message from the Chair

Dear Members

I'm sure many of you are enjoying beautiful autumn blooms in your gardens now. The colours of roses are at their deepest in autumn when the sun does not fade them so quickly. We remember our ANZACS this Tuesday and the beautiful Galipolli Rose that you can see at Peace Park is a fitting memorial for the lives given for our nation.

We enjoyed our gathering at Peace Park last meeting, and the planting of 'Little Suzie' with our thanks to Intan. Some photos of the occasion are in the *Around the Ridges* section of this newsletter.

Neutrog orders were audited and organised for collection on 31st March. Our thanks to Laurie Irvine, Paul Walsh, Lorraine Vost, Peter Goodger and Bruce Robinson for their generosity in organising the quite large order, and to Hans Van de Haar and the staff at Hardware Man for allowing the delivery to this collection point, and the disruption it causes to their delivery yard. Our next order closes on 9th August for collection in September.

Colin was busy at the Easter Show during the 6 days of rose exhibition at the stall set up for information. Thank you to Jill Millburn, Susan Alexander and Deidre McLaughlin for giving time to assist at the stall.

Our meeting on 29th April – identifying our roses and where they might fit on showbench. Rather than set up show bench at the beginning of the meeting, we will have a progressive showbench going through the various rose varieties – using some photos of types, and a demonstration of how they might fit on the showbench. It will be a great way to come to know what varieties and types we are growing. **BRING ALONG WHATEVER ROSES YOU HAVE BLOOMING IN YOUR GARDEN AND WE WILL USE THEM IN DEMONSTRATION.**

This Sunday, 23 April – Lorrie Zammit will go to the workshop on judging roses. There are spaces for anyone else who would like to go. Information later in the newsletter.

WELCOME TO NEW MEMBER- Debra Keller from Gerringong. Hope to meet you in May – We will have a garden visit as our May meeting to Hans & Lyn Van de Haar at Farmborough Hts – bringing lunch to share and exotic plants to enjoy... *more later about this.*

Enjoy your autumn blooms.

Kristin - Illawarra Chair

the necessary changes
to improve the quality
of your life."*

THE ROSE GARDEN THIS MONTH-

POTTED ROSES

GROWING POTTED ROSES (2023) By Mark McGuire, Australia

Please note that this is my preferred method of growing miniature or mini-flora roses in pots. As I have had remarkable results over the last 30 years of growing, these methods that I suggest are worth trying.

Before I go on any further there is no magic formula, be it soil mixtures, fertilisers or whatever. Rosarians still succumb to the belief that there is ...well I don't know of any!

One should first pay particular attention to hygiene and safety. A face covering mask and gloves are essential as potting mix contains many organisms that are or can be detrimental to one's health.

For best results a black plastic container of 400 mm or 16 inches is my preferred size. Yes, you can still use smaller pots; however, the results will not be as good. If you were to drive around your suburb on rubbish collection day, then maybe you can be lucky enough to acquire them for free. I have accumulated some 100 or more pots over the years this way. Make sure you thoroughly clean out the pots that you intend to use and that they have several weep holes so the water can easily disperse. Otherwise, the roots will become waterlogged and your bare rooted rose will suffer accordingly and perhaps soon die. Another good idea is to use some shade mesh cloth or pieces of broken tiles, or some such matter

placed over the weep holes as this will stop your soil mixture leaching out the bottom. My preferred mixture is to use a high quality potting mix such as one of the better Debco products, costing around \$12-\$15 or so. This 30 litre bag usually contains Saturaid wetting agent, controlled release fertilisers, water retaining crystals, and combination of trace elements and growth stimulants. Sounds marvellous. Remember you only get what you pay for.

You will notice on nearly all bags of Potting Mix on sale now have the Australian Standard Certificate printed on the bag, which is a rectangle of some 5 ticks on a red label for the premium mix which is what I suggest you use for best results. When you see 5 ticks on a black label means you are getting a standard type mixture. The larger Supermarkets and Nurseries sell these for around the \$4-5. So now you have your premium potting mix and from here I suggest you buy some premium garden soil. Mix together in approximately 50-50 proportions and add a few handfuls of the Neutrog product Seamungus, which is a blend of seaweed, fish, huric acid and manure. This is an Australian product and no doubt those living overseas can source a similar product.

It is always in your best interest to purchase a Gardman pH tester meter which can cost about \$12-\$15 to test the potting mix when purchasing. It should read about pH7 and if much lower than you have a lesser quality potting mix. This tester is essential for testing your pH during the growing season. A similar Gardman Moisture Meter probe can be purchased for a similar cost for checking your water levels in your pots. See photo. I have compared the very expensive testing meters costing in the \$250 plus range and results have almost been identical!

Next place your mixture in the pot leaving about a 100 mm gap between the top of the soil and the rim of the pot. Place in your bare rooted rose, or if taken from a smaller pot, check

over the root system for any damage and if so trim back. Fan out the roots and place the plant into the soil making sure the bud union is slightly above the top of your soil mix. Over time the soil will descend in the pot. With limited pressure make sure the plant is sitting firmly in the centre of the container. Apply a couple of soakings of water and then add about 50mm of cow manure, making sure it is kept well away from the trunk of the rose, and then place on top of the manure as much Lucerne hay as the pot will allow without spilling all over your yard. Cow manure is by far the best to use and readily available whereas Lucerne Hay (Alfalfa) is head and shoulders above any other mulch.

So yes, during the growing season keep topping up your pots with these two products. Maybe you may have to pay a little extra for the above with the results being worthwhile. Do not be

misled by the Nurseries as they tend to steer you onto an alternate product which will be cheaper. No doubt you wish for results that are worthy of all your effort, so this is my recommendation.

By using this method you will induce worms to multiply and greatly benefit your soil mix.

Take note there is no soil in potting mixtures and therefore no worms. If your garden has an abundance of worms it will mean your soil is rich and productive and that is what you need in your pots. Pure garden soil in a pot would soon become too solid (hard) and detrimental to the growth of your plant. To stop your pot from overheating be sure your newly

potted plant container is not contacting the concrete or tiles underneath.

Raise your pot by using a few small bricks or small terracotta feet that can readily be purchased in the Nurseries. Never

place your pot in a saucer type dish that will retain water as this will also eventually lead to root rot.

I have not used any commercial fertiliser since 2006-7 and it is now 2023! All rose growers firmly believe that they should add some recommended nutriment to their pots. This is not the case. So after reading this article you may change your mind!

When do we need to feed? I suggest after potting/planting a good six months or so. Very little fertiliser is best. If the manufacturers recommend 100 grams then only apply about 20% of that every couple of months. I recommend that you use liquid fertiliser rather than pellets or granules. Whatever you do, be sure to give the pot a good drenching beforehand and a good soaking afterwards. Water is still the best fertiliser!

If you wish to grow the bigger Floribunda's or Hybrid tea roses then follow the same procedure as above. You will need to use a rather large pot something about the size of a half beer barrel, which is about 20 litres, (9 gallons).

When do we re-pot? Rarely ever have I done so. None of my pots

have been re potted over the last 28 years and yet my results are great, or so I think.

A black plastic pot becomes some 15 degrees warmer than a terracotta pot on a very hot day and one may need to water twice daily when this occurs. To delay or prevent blackspot always water before midday.

Don't be misled that when rain appears that your pots do not need watering...how wrong can you be!

The combination that I have recommended for your pots is best served by using a handheld rose wand making sure the

water spreads all over the top of the pot. If you tend to use a drip type system, you will soon notice that it tends to make what I refer to as "ant tracks".

Meaning the water flows down these little tracks without spreading over the whole mix, this is not what you want. The nutriments contained need a good soaking all the time. No, don't go looking for ants...this is just a saying. Water flowing at a fast rate from the bottom of your pots is not a good sign. No doubt you will encounter problems with your roses such as blackspot, aphids, mildew etc and if so, you should contact your Rose Nursery for the best advice.

Your pots may occasionally show a low reading of pH, if so, add some Iron Chelates. If your leaves tend to yellow, then add a liberal dose of Dolomite.

Your combination of potting mix, garden soil topped up with cow manure and thick application of Lucerne Hay should retain the water enough to leak away slowly.

Lastly you will need to check the pH of your potted soil every so often or if you suspect why the plant is not performing as it should. The ideal pH is 6.5 to 7. This is rather hard to accomplish, however, if you follow my recommendations, it is attainable. Below pH 7 the soil is acidic, and roses best perform when so. Whilst above pH 7 the mix is considered alkaline. I have two different manufacturers pH kits so that I can compare my results. However, I must admit they both give identical readings of the same soil. There are some rather inexpensive test kits available, and they can last forever. Follow the instructions and if you are having a problem consult the horticulturist at your local nursery.

In most cases when seeking advice always approach the top person, yes, the very top dog, in that particular field

whether it is the exhibitor, judge, breeder, soil environmentalist or whoever.

Most are only too willing to offer advice, so do not be afraid to ask.

If you wish to become competitive by exhibiting in Shows, then you have to devote much more time to your roses. People such as Roger Federer, Sachin Tendulkar, Ashley Barty or anyone else in their chosen field never became famous without going on and taking that extra step to achieve their goals. More effort will render better results.

With winter pruning there is no right or wrong way. Prune high or low as the results will be nearly identical.

Low pruning appears to give more water shoots whereas cutting higher tends to produce more flowers. Keep your bushes clear of deadwood and dieback during the growing season, whilst you must dead head regularly (removing spent blooms). They look good on the bush however they are detrimental to the future

growth and reproduction of more flowers.

Be aware some roses do not like pots. I have struck this problem on very few occasions. Once placed out in the garden they have taken off and become potential Champions!!

Thank you Mark for passing on your wisdom collected over decades of growing roses.....Kristin

Last minute information:

WORKSHOP - SUNDAY 23RD APRIL 2023 –

at The Macarthur Centre for Sustainability, 1 Mt Annan Drive, Mt Annan.

This workshop will be for those who are interested in learning what a judge is looking for and especially those who are interested in becoming a trainee judge. Contact Ted Morphet on (02) 4735 3668

May meeting- This will be a picnic gathering at the home and garden of Hans & Lyn Van de Haar – a 12-12.30 arrival bringing something to share for lunch and a short meeting, and ramble around the garden, which Hans tells me now as some more exotic plants since our last visit. We look forward to the return visit..... more details next newsletter.

MINUTES OF THE MEETING OF ILLAWARRA ROSE SOCIETY HELD AT PEACE PARK ON SATURDAY 25TH MARCH 2023.

A very informal meeting commenced at Peace Park, Kiama commencing at 1.30 pm.

WELCOME by Chairperson Kristin to 21 members and guests that attended recorded in sign on book.

APOLOGIES: 6 Apologies received: Jenny Swan, Michelle Sudolowski, Judith Oyston, Janet Bowden, Frans Buskermolen and Bev Emmett.

MINUTES: Previous minutes from last meeting accepted as correct. Moved Lorrie and seconded Shirley.

CORRESPONDENCE:

1. Email from Sue Marshall about a visit to Hans and Lyn Van Der Haar's garden, Southern Sydney Club is interested in attending.
2. Carol McVeigh- Wagner's Roses Discount Code 100%ROSES.
3. Carol McVeigh –Rose Judging Workshop 23rd April at Mt Annan.
4. Colin Hollis, requesting Volunteers to be held at the Sydney Royal Easter Show.
5. Robert Coady looks like our grant application for Peace Park has been successful.

TREASURERS REPORT: Presented by Robert: Everyday Account \$2,839.35. Show Account \$6,550.64. Friends of Peace Park \$147.25 and Fixed Deposit \$8,119.81. Total funds \$17,657.06. Moved as correct by Robert and Seconded by Jill.

BUSINESS ARISING:

1. Our Neutrog order has arrived early, still to be checked before being available for collection.
2. Garden Visits, hoping to have a visit to Lyn and Hans Van Der Haars Garden for our May Meeting and a visit to Intan's garden in Kangaroo Valley possibly November.
3. Christmas Party, Warilla Bowls preferred venue 25th November (since changed to December 2nd).
4. Still trying to get a treasurer.
5. Colin Hollis, Judges Workshop 23rd April

Intan gave a talk about the Little Suzie Rose which she donated to Peace Park, and she planted it next to the rotunda followed by a talk from Colin on the History of Peace Park. The Raffle of a Little Suzie Rose was then drawn and won by Shirley Coady

Meeting concluded at 3.00 pm followed by Afternoon Tea.

Ideal for all flowering plants
